---	---	--	---	---

REGIMEN-SPECIFIC POINT

The active treatment days and the rest days are both part of the 28-day cycle. A calendar or Treatment Passport can help prevent dosing on the wrong day.

MONITORING / SUPPORT

- Take doses after the morning and evening meals exactly as prescribed.
- Do not double a dose for a missed or vomited dose; follow your oncology/pharmacy instructions.
- Blood counts are particularly important because neutropenia can be significant.

Where changes may show up

Patient-first anatomical guide · report the symptom rather than trying to diagnose the cause

Blood + infection

Low white cells are a major risk. Fever, shivers or suddenly feeling unwell requires immediate oncology contact.

Fatigue

Tiredness is common; a sudden or marked change can also reflect anaemia, infection or dehydration.

Stomach + bowel

Nausea, vomiting, diarrhoea or reduced appetite can occur. Persistent symptoms can cause dehydration.

Skin

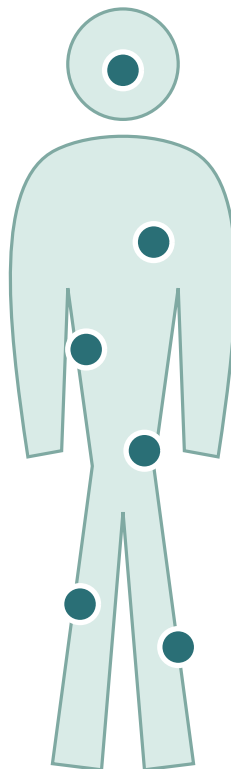

Rash or other skin changes should be reported if persistent or severe.

Mouth

Mouth soreness can affect eating and drinking. Report ulcers that limit intake.

Home medicines

Keep the tablets in their original packaging and follow the handling/storage instructions from your oncology pharmacy.

WHEN TO CALL

Call oncology urgently for fever, shivers, sudden illness, uncontrolled vomiting, persistent diarrhoea, bleeding, inability to drink or marked weakness. Severe breathing difficulty, collapse or severe chest pain: call 112/999.
