

TCHP

Docetaxel + carboplatin + trastuzumab + pertuzumab

WHAT THIS REGIMEN IS FOR

Neoadjuvant HER2-positive breast cancer treatment for selected high-risk, locally advanced or inflammatory disease, according to the encoded NCCP 00722 regimen.

MEDICINES

Docetaxel

Carboplatin

Trastuzumab

Pertuzumab

TREATMENT JOURNEY

Before cycle 1 Baseline blood tests and cardiac assessment are reviewed.	Cycle day 1 Docetaxel + carboplatin + trastuzumab + pertuzumab are given.	Days 2-21 Recovery, supportive medicines and symptom monitoring.	Every 21 days The cycle repeats if review and blood tests allow.	After chemotherapy HER2-directed treatment usually continues according to the post-operative/adjuvant treatment plan.
--	---	--	--	---

REGIMEN-SPECIFIC POINT
The chemotherapy phase and the longer HER2-directed treatment plan are related but not identical. Ask your team what continues after surgery.

MONITORING / SUPPORT

- Follow the prescribed steroid premedication around docetaxel.
- Growth-factor support may be part of the plan; follow the exact product and timing given by your oncology team.
- Cardiac function is monitored because trastuzumab/pertuzumab can affect the heart.

Where changes may show up

Patient-first anatomical guide · report the symptom rather than trying to diagnose the cause

Heart

HER2-directed treatment can reduce heart pumping function. New breathlessness, swelling or chest symptoms should be reported.

Nerves

Docetaxel can cause tingling or numbness. Report persistent symptoms before the next cycle.

Bowel

Diarrhoea is common with pertuzumab-containing treatment; persistent or severe diarrhoea needs early management.

Skin, nails + mouth

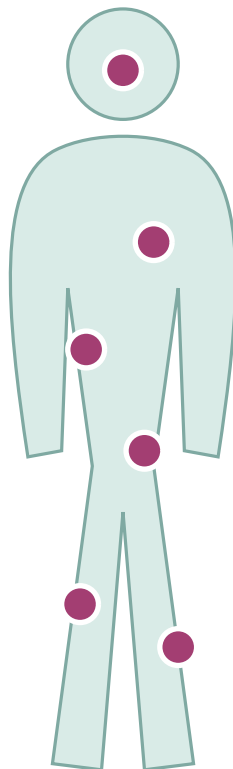

Rash, nail changes, mouth soreness and taste change can occur.

Blood + infection

Docetaxel/carboplatin can lower blood counts. Fever or sudden illness needs immediate oncology contact.

Infusion reaction

Flushing, rash, wheeze, swelling or sudden symptoms during treatment should be reported to the nurse immediately.

WHEN TO CALL

Call oncology urgently for fever, severe diarrhoea, new breathlessness, swelling, severe rash, uncontrolled vomiting, significant bleeding or a rapidly worsening symptom. Severe breathing difficulty or chest pain: call 112/999.
