SACTCHECK · SACT TREATMENT

Pemetrexed + Carboplatin

NCCP 00318 v6 · 21-day cycle

Both chemotherapy medicines are planned on Day 1 of a 21-day cycle. For pleural mesothelioma, the source describes up to 4–6 cycles. For advanced non-squamous NSCLC, it describes 4–6 combination cycles followed, when appropriate, by a separate pemetrexed maintenance plan (NCCP00222). The selected preoperative nivolumab combination uses three cycles and a separate immunotherapy plan (NCCP00849). Your team confirms which course applies and may stop or change it earlier.
