NCCP 00545 · VERSION 3

Zoledronic acid · adjuvant breast treatment

Zoledronic acid by IV infusion once every six months for up to five years, unless progression or unacceptable toxicity changes the plan. The usual source dose is 4 mg, with renal review before prescribing.

Your treatment and review passport

Bring this to reviews. Record symptoms, treatment changes and questions when helpful. You do not need to complete a daily diary or calculate a toxicity grade.

The four sheets are reusable review periods, not a prescribed number of cycles. Follow the treatment and rest days agreed with your team; do not calculate a restart from this sheet.

These patient-language prompts are not a validated questionnaire or a formal CTCAE assessment. Urgent symptoms override the form.

Emergency: 112 / 999. Severe chest pain, major breathing difficulty, collapse or stroke symptoms need emergency help.

Contact your treating team promptly: Report jaw pain, exposed bone or a non-healing mouth wound, reduced urine, tingling or muscle spasms, painful red eyes, or new thigh/ groin pain.
