Pembrolizumab · every 6 weeks · adjuvant melanoma

National Cancer Control Programme (NCCP) 00558 · Draft source reconciliation; independent clinical, pharmacy and patient/PPI review pending

PRACTICAL TREATMENT GUIDE

Practical treatment planning

Agree the arrangements with your oncology team.

STEP 1

Taking or receiving treatment

Pembrolizumab is given as 400 mg by intravenous (IV) infusion over 30 minutes, on Day 1 every 6 weeks. Allow extra time for assessment, preparation and observation.

STEP 2

Missed, vomited or held treatment

If a visit is missed or treatment is held, contact the unit for a new plan. Do not count a missed appointment as a dose received. An interval change, operation or new phase does not erase earlier immune toxicity or a permanent-stop decision.

STEP 3

Appointments and supply

Plan blood tests, travel and medicine collection in advance. If you need an interpreter or someone to help at home, tell the team before the appointment.

STEP 4

Paper copies and contact information

Ask for your latest schedule and contact details on paper. Replace old versions when treatment changes so everyone helping you uses the same plan.
