NCCP 00237 · clinician draft

Dabrafenib alone — advanced melanoma

The treatment this guide covers This is dabrafenib monotherapy for advanced melanoma. Do not import the food, heart-testing, fertility or duration instructions of a different BRAF/MEK combination. The NCCP fever table states 38.5°C, while current EMA product information states interruption at 38°C for monotherapy; this guide uses the earlier current-product safety trigger and the team must reconcile the written plan.

Supportive prescription draft for review. This is a regimen template. It is not an issued patient prescription; individual review and completion are required.

Separate scripts for each phase

Choose the active phase in the clinician workflow. Each script has its own medicines, timing and review checks.

- **Dabrafenib alone — advanced melanoma · support plan** — Minimal to low per NCCP 00237 v6; local policy
