Vemurafenib alone — advanced melanoma

To control advanced BRAF V600-mutated melanoma with a daily oral targeted medicine; benefit and tolerability are reviewed for the individual.

Advanced melanoma · NCCP 00102 v6 · Document revised 6 November 2026

Your personal plan: this is the standard regimen schedule. Your team confirms your prescribed doses, cycles, treatment changes and appointments in your written plan.

This is vemurafenib monotherapy. It is not the cobimetinib combination and has no cobimetinib seven-day break. The team must plan any radiotherapy because BRAF treatment can increase radiation-related reactions.

My overall treatment

Vemurafenib twice daily, about 12 hours apart, every day. A 28-day review cycle does not mean a planned tablet-free week.

Treatment course
Daily tablets; no planned week off.

A 28-day reference calendar

Day 1–28
At home each day

Timing may change after review. Side effects can occur on any day; there are no guaranteed safe days.

My tests and checks

When	What is checked	Timing / reason
Before	**Baseline safety** NCCP / current product information / individual plan	BRAF, blood count, kidneys/liver, ECG-risk and skin review.
During	**Safety checks** NCCP / current product information / individual plan	Bloods each cycle; ECG four-weekly to week 12, then 12-weekly/after changes; monthly skin checks per current product information.
After / response	**Follow-up** NCCP / current product information / individual plan	Continue skin surveillance up to six months; other-cancer surveillance and melanoma response scans have separate plans.

Between treatments

- Use sun protection; report new skin lesions, eye changes, fainting or severe rash. Missed dose: only take if at least four hours before next; no extra after vomiting.

Bring medicine list, test dates and actual oncology/out-of-hours numbers. Example numbers must be replaced.

When to get help

Call 112 / 999 for severe breathing difficulty, severe chest pain, collapse or a seizure.

Call oncology immediately: temperature 37.5°C or above, 36°C or below, shivering or suddenly feeling unwell, even with a normal temperature. Follow your hospital's temperature instructions. If you cannot reach the team, seek urgent medical assessment. Do not wait for the next appointment.

Oncology daytime: 087 12345678 · **Out of hours:** 087 87654321
EXAMPLE ONLY — team must replace both numbers before patient use.

Feasibility build. Clinical, pharmacy and patient/PPI review pending. Your team confirms your personal plan.

What to watch for

You do not need to know which medicine caused a symptom before calling.

1 Head / fatigue

Vemurafenib

Headache and tiredness can occur. New severe headache, confusion, collapse or neurological changes need urgent assessment rather than attribution to tablets.

3 Heart rhythm

Vemurafenib

The electrical rhythm can change; ECG and blood chemistry checks help detect risk. Palpitations or fainting need prompt assessment.

5 Liver

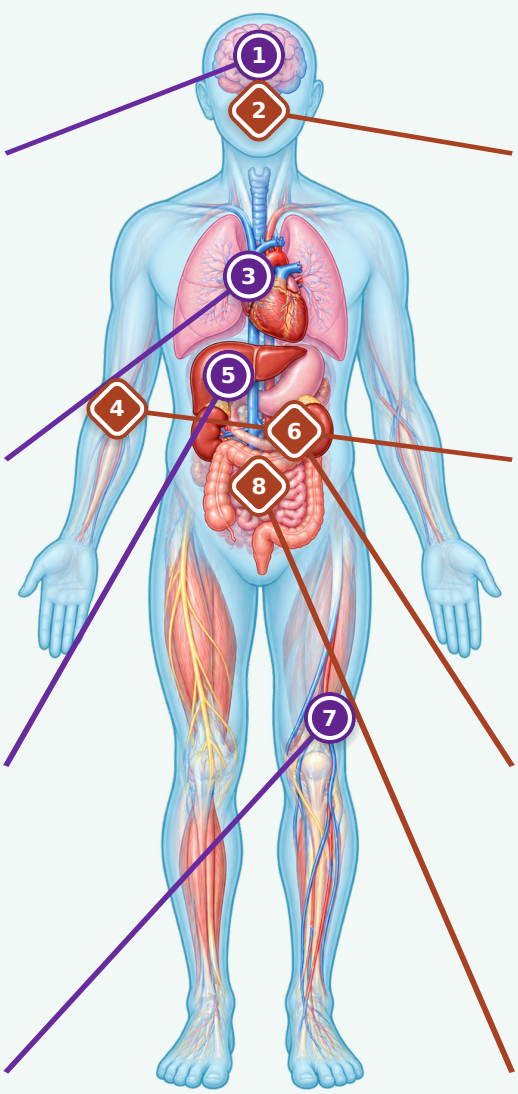

Vemurafenib

Blood tests check for liver injury. Yellow skin or eyes, dark urine or severe upper-abdominal discomfort need prompt review.

7 Joints / muscles

Vemurafenib

Joint or muscle pain can affect daily activities. Tell the team if pain limits walking or self-care, or occurs with marked weakness.

2 Eyes

Vemurafenib

Eye pain, redness, light sensitivity or blurred vision can signal inflammation. Report promptly for eye assessment.

4 Skin / sun

Vemurafenib

Photosensitivity, rash and new skin cancers can occur. Protect skin and report new growths; blistering or peeling is urgent.

6 Kidneys / fluids

Vemurafenib

Kidney injury or dehydration can affect dosing. Report reduced urine or inability to keep fluids down.

8 Stomach / bowel

Vemurafenib

Nausea, diarrhoea and reduced appetite can cause dehydration. Keep the agreed symptom plan and report persistent or severe symptoms.

Selected effects, not every possible effect or a prediction. Blood-count, skin and line markers are schematic. Number and text carry meaning; colour is decorative.

Contact the oncology team promptly for fainting or palpitations, eye pain or blurred vision, a blistering or rapidly spreading rash, severe sunburn, persistent vomiting or diarrhoea, reduced urine or yellow skin or eyes. Report new or changing skin growths even when the melanoma is responding.

SACTCheck

Name: _____

Vemurafenib

Vemurafenib twice daily, about 12 hours apart, every day. A 28-day review cycle does not mean a planned tablet-free week.

Phase: _____ Review plan: team to confirm

Daytime (EXAMPLE) 087 12345678

Out of hours (EXAMPLE) 087 87654321

Unwell or fever? Call oncology now.
Severe breathing difficulty, chest pain or collapse: **112 / 999.**

EXAMPLE NUMBERS — replace before patient use.

BACK / TREATMENT RECORD

My review record

Use the card as a treatment and urgent-contact record. There is no preset completion stamp count for this ongoing treatment.

Review	Date / initials

My treatment information

Latest review date: _____

Plan changed? Ask the team to update this card.

CUT outer border

FOLD centre — do not cut

Keep the record accurate

The team dates and initials each completed review. Daily tablets continue according to your prescribed plan; a review stamp does not mean the course is complete or authorise further treatment. Record interruptions or a changed plan. Keep any medicine-specific alert card too.

Put your treatment page on your phone

Scan your QR and check the treatment name. Save that page to your home screen.

iPhone / Safari

Tap Share → Add to Home Screen. Select Open as Web App if offered, then Add.

Android / Chrome

Tap the three-dot menu → Add to Home screen or Install and create shortcut. Choose the shortcut option and confirm.

Menu wording varies. The QR opens information, not a personal record. Paper stamps do not update the website. Check that the saved icon opens the correct treatment.
