NCCP 00373 · clinician draft

Cobimetinib + vemurafenib — advanced melanoma

> **The treatment this guide covers** Only cobimetinib has the planned days 22–28 break. Vemurafenib continues. ECG measures rhythm; an echocardiogram or other LVEF test measures pumping function, and one does not replace the other. Radiation treatment needs a separate coordinated plan.
>
> **Supportive prescription draft for review.** This is a regimen template. It is not an issued patient prescription; individual review and completion are required.

Separate scripts for each phase

Choose the active phase in the clinician workflow. Each script has its own medicines, timing and review checks.

- **Cobimetinib + vemurafenib — advanced melanoma · support plan** — Cobimetinib minimal to low; vemurafenib minimal to low in NCCP 00373 v3; local policy
  Cobimetinib + Vemurafenib
