NCCP 00448 · VERSION 4B

# Panitumumab + FOLFIRI

Day 1: panitumumab, irinotecan, folinic acid and fluorouracil, followed by a fluorouracil pump for about 46 hours; disconnection is arranged around Day 3. A cycle lasts 14 days. Treatment continues while it is helping and side effects remain acceptable.

Draft for clinical, pharmacy and patient/PPI review. Selected effects; not a complete medicine leaflet.

## A picture of side effects

Numbered symptom boxes connect to the anatomical illustration. The medicine responsible may be uncertain; report the symptom.

**1 Eyes**

**Panitumumab**

New eye pain or visual change needs prompt advice.

**2 Mouth**

**Fluorouracil + folinic acid**

Report ulcers or pain affecting eating and drinking.

**3 Chest**

**Fluorouracil**

New chest pain or breathlessness needs urgent assessment.

**4 Bowel**

**Irinotecan / fluorouracil**

Report diarrhoea, increased stoma output or severe abdominal pain.

**5 Hydration / minerals**

**Panitumumab + chemotherapy**

Reduced urine, cramps or weakness need advice; keep your blood-test appointments.

**6 Skin / nails**

**Panitumumab**

Report rash, cracks or painful nails early.

**7 Hands / feet**

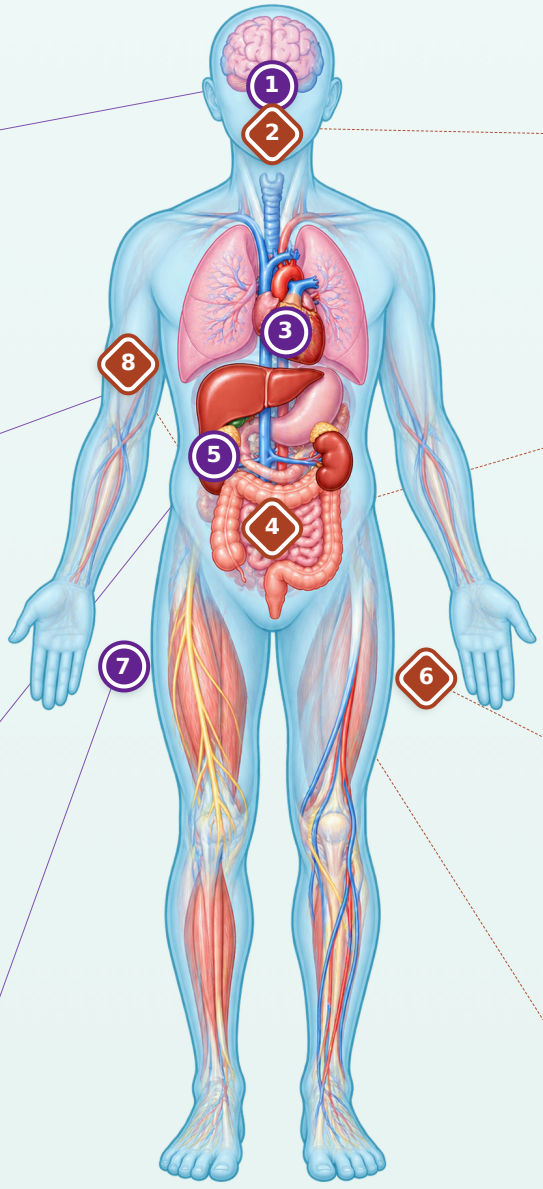

**Fluorouracil**

Report painful redness, peeling or difficulty using your hands or walking.

**8 Pump / line**

**Treatment delivery**

Pain, leakage, swelling or a loose connection needs immediate advice.

Selected effects, not every possible effect or a prediction. Blood-count, skin and line markers are schematic. Number and text carry meaning; colour is decorative.

Fever, shivers or suddenly unwell: contact oncology immediately. Severe chest pain, breathing difficulty, collapse or seizure: 112 / 999.

NCCP 00448 · PRACTICAL SUPPORT

# Your treatment, at home.

## Important medicine-specific effects

### Panitumumab

- Rash, dry skin, cracks and sore nails
- Eye inflammation or corneal injury
- Low magnesium, calcium or potassium
- Diarrhoea, dehydration and kidney problems
- Infusion reaction; rare serious lung or skin effects

### Irinotecan

- Early cramps, sweating and diarrhoea
- Delayed diarrhoea and dehydration
- Low blood counts / serious infection
- Nausea, mouth soreness and fatigue
- Hair thinning or loss
- Rare serious lung or allergic reactions

### Folinic acid

- Enhances fluorouracil activity and toxicity
- Rare allergic reaction
- Diarrhoea / mouth soreness in combination

### Fluorouracil

- Diarrhoea, dehydration and mouth ulcers
- Low blood counts / infection
- Hand-foot skin soreness
- Cardiotoxicity including chest pain / ischaemia
- Severe early toxicity including DPD-related toxicity
- Pump / central-line complications

## Make the plan practical

### Start skin care early

Ask for your skin-care plan before the first infusion. Use the recommended moisturiser and sun protection; your team may prescribe a cream or an antibiotic. Do not use ordinary acne treatments without advice.

### Minerals and blood tests

Panitumumab can lower magnesium and other minerals even when you feel well. Blood tests continue during treatment and for about eight weeks after it finishes. Take replacement treatment only as prescribed.

### DPD testing before fluorouracil

DPD helps the body break down fluorouracil. Deficiency can cause severe toxicity. Testing guides the plan but cannot exclude all serious reactions; unexpectedly severe early diarrhoea, mouth sores or illness needs immediate review.

### Your diarrhoea plan

Have the prescribed anti-diarrhoeal medicine and written instructions before going home. Follow that plan as soon as diarrhoea starts. Call promptly for persistent symptoms, cramps, fever, blood in stools or reduced urine.

**Emergency: 112 / 999.** Severe breathing difficulty, collapse, seizure or severe chest pain needs emergency help.

**Contact oncology immediately** for temperature ≥37.5°C or ≤36°C, shivering or suddenly feeling unwell, even with a normal temperature. Follow your own hospital's instructions. If you cannot reach the team, seek urgent medical assessment.
