SACTCHECK / PATIENT TREATMENT PASSPORT

Atezolizumab + bevacizumab

NCCP 00831 - Set-up and treatment plan

My treatment plan

Treatment purpose / goals:

My oncology SOS number:

My treating team / hospital:

Medicines: Atezolizumab - Bevacizumab

Schedule to confirm with my team

Before C1: Varices screening; blood count, liver/kidney, glucose, thyroid, BP and urine protein assessment.

C1 - Day 1: Atezolizumab IV or SC, then bevacizumab IV. Tell the nurse immediately about an infusion or injection reaction.

Days 2-21: Notice new symptoms. Follow any home BP instructions and keep your SOS number accessible.

C2 - Day 22: Repeat review, bloods, BP and urine; thyroid testing is scheduled every six weeks. Treatment only if appropriate.

Later / after: Each cycle follows the same 21-day pattern. Immune effects may still appear after treatment stops.

My prescribed supportive medicines / changes to my plan:

Call first; write later. Do not wait for the next appointment or a diary score if a symptom worries you. Follow your oncology team's urgent-call instructions. For a medical emergency in Ireland call 112 or 999.

Scan for your regimen-specific patient portal and visual guide.
