NCCP 00213 · clinician draft

Irinotecan · every three weeks

> **Supportive prescription draft for review.** This is a regimen template. It is not an issued patient prescription; individual review and completion are required.

Day 1 · irinotecan

Active medicines: Irinotecan

Emetogenic risk: Moderate

Medicine	Dose / route	When
Ondansetron	16 mg PO once	Before Day 1 chemotherapy NCIS V8 moderate-risk row; consider QT risk, low electrolytes, interactions and the individual prescription.
Dexamethasone	8 mg PO once	Before Day 1 chemotherapy NCIS V8 moderate-risk row.
Dexamethasone	8 mg PO daily	Days 2 and 3 after the administered Day 1 chemotherapy NCIS V8 delayed prophylaxis. Reconcile with any other steroid prescription; re-anchor dates if treatment is delayed.
Metoclopramide	10 mg PO up to three times daily as required	Rescue nausea treatment only as prescribed NCIS V8 rescue option; check contraindications, renal function, interactions and prescribed duration.
Atropine sulphate	Per prescribed irinotecan protocol	Before irinotecan when prescribed; assess acute cholinergic symptoms Avoid in glaucoma. This treats/prevents the acute cholinergic syndrome; it is not the delayed-diarrhoea rescue medicine.

Additional phase-specific support

- Antiemetic classification refers to the active treatment day. Reconcile duplicate steroid entries before prescribing.
- No automatic G-CSF schedule is added; use the patient’s neutropenia history, risk and consultant plan.
- Provide a written irinotecan delayed-diarrhoea rescue and escalation plan before treatment; distinguish it from immediate infusion-related cramps/sweating. Fever, severe pain, dehydration or diarrhoea not responding to the prescribed plan needs urgent review.

Before signing: verify allergies, current medicines, interactions, renal / hepatic function, QT risk, sedation, prior response, total steroid exposure and the rescue-medicine duration. Do not duplicate medicines from another phase.
