NCCP 00892 · VERSION 2

Adjuvant ribociclib + endocrine therapy

The usual adjuvant starting dose is ribociclib 400 mg once daily on Days 1–21, followed by Days 22–28 off, for up to three years. The aromatase inhibitor continues every day on its own plan; ovarian suppression is added when indicated.

Your treatment and review passport

Bring this to reviews. Record symptoms, treatment changes and questions when helpful. You do not need to complete a daily diary or calculate a toxicity grade.

The four sheets are reusable review periods, not a prescribed number of cycles. Follow the treatment and rest days agreed with your team; do not calculate a restart from this sheet.

These patient-language prompts are not a validated questionnaire or a formal CTCAE assessment. Urgent symptoms override the form.

Emergency: 112 / 999. Severe chest pain, major breathing difficulty, collapse or stroke symptoms need emergency help.

Contact your treating team promptly: Report new breathlessness, jaundice, marked bleeding, severe diarrhoea, inability to drink, chest symptoms or a severe rash promptly.
