NCCP 00775 · clinician draft

TRAIN-2 · IV pertuzumab / trastuzumab

Supportive prescription draft for review. This is a regimen template. It is not an issued patient prescription; individual review and completion are required.

Day 1 · carboplatin combination

Active medicines: Paclitaxel + Carboplatin + Pertuzumab + Trastuzumab

Emetogenic risk: High · carboplatin AUC ≥4

Medicine	Dose / route	When
Aprepitant	125 mg orally	Day 1
Ondansetron	16 mg orally	Day 1 Individual dose / QT / hepatic review
Dexamethasone	12 mg orally	Day 1 Reconcile chemotherapy premedication steroids
Aprepitant	80 mg orally daily	Days 2–3
Metoclopramide	10 mg orally up to three times daily	Subsequent days: duration and use to be confirmed Individual contraindications, renal function and duration review
Dexamethasone	8 mg orally daily	Days 2–4 Carboplatin AUC ≥4 antiemetic row; reconcile total steroid exposure

Additional phase-specific support

- First paclitaxel dose: dexamethasone 8 mg IV, chlorphenamine 10 mg IV and famotidine 20 mg IV 30 minutes before treatment.
- Day 8 and later: no routine dexamethasone unless consultant-directed for reaction/risk; chlorphenamine continues, and famotidine omission requires consultant/local-policy agreement.
- Reconcile antiemetic steroids with taxane premedication; do not duplicate.
- Clinical template for individual review, not an issued prescription. Confirm allergy, pregnancy precautions, interactions and local policy.
- Clinical template for individual review, not an issued prescription. Confirm allergy, pregnancy precautions, interactions and local policy.

Before signing: verify allergies, current medicines, interactions, renal / hepatic function, QT risk, sedation, prior response, total steroid exposure and the rescue-medicine duration. Do not duplicate medicines from another phase.
