NCCP 00353 · clinician draft

Osimertinib monotherapy

Which treatment this guide covers This guide covers NCCP 00353 osimertinib on its own: T790M-positive advanced disease, first-line activating-EGFR advanced disease, or completely resected stage IB–IIIA Ex19del/L858R adjuvant treatment. The newer licensed post-chemoradiation setting and osimertinib with platinum/pemetrexed need their own applicable plan; their study results and support medicines are not added to this monotherapy suite.

Supportive prescription draft for review. This is a regimen template. It is not an issued patient prescription; individual review and completion are required.

Separate scripts for each phase

Choose the active phase in the clinician workflow. Each script has its own medicines, timing and review checks.

- **Osimertinib alone · daily oral treatment** — Minimal to low (oral)
