NCCP 00570 · clinician draft

Lorlatinib therapy

Which treatment this guide covers This guide covers lorlatinib alone for ALK-positive advanced non-small-cell lung cancer. The available Irish NCCP v3 document lists use after particular earlier ALK medicines. The current European licence also includes people who have not had an ALK inhibitor. The team must confirm your treatment setting and the current Irish protocol and access arrangements before prescribing; the source versions currently disagree.

Supportive prescription draft for review. This is a regimen template. It is not an issued patient prescription; individual review and completion are required.

Separate scripts for each phase

Choose the active phase in the clinician workflow. Each script has its own medicines, timing and review checks.

- **Continuous lorlatinib · individual supportive care** — Minimal to low (oral)
  lorlatinib
