Weekly cetuximab

> **Supportive prescription draft for review.** This is a regimen template. It is not an issued patient prescription; individual review and completion are required.

Subsequent weekly cetuximab

Active medicines: cetuximab

Emetogenic risk: low

Medicine	Dose / route	When
Chlorphenamine	10 mg intravenous (IV)	60 minutes before each infusion
Dexamethasone	8 mg IV	60 minutes before each infusion Reconcile antiemetic steroid; no automatic duplication.

Additional phase-specific support

- Premedication continues for subsequent infusions.
- Head/neck radiotherapy (RT) requires separate mucosal, skin, swallow and nutrition support.
- Post-treatment monthly electrolytes/Mg/Ca for two months.

Before signing: verify allergies, current medicines, interactions, renal / hepatic function, QT risk, sedation, prior response, total steroid exposure and the rescue-medicine duration. Do not duplicate medicines from another phase.

Individual changes / rescue duration: _____
Prescriber / date: _____ Pharmacy review: _____
