FOLFOX-4

> **Supportive prescription draft for review.** This is a regimen template. It is not an issued patient prescription; individual review and completion are required.

Day 2 · FOLFOX4 fluorouracil/folinic acid

Active medicines: Folinic acid + Fluorouracil

Emetogenic risk: Low treatment-day risk; delayed Day 1 moderate-risk coverage still applies

Medicine	Dose / route	When
Dexamethasone	8 mg PO once	Day 2; already part of the Day 1 moderate-risk Days 2–3 plan Reconcile this single dose across both plans; do not issue an additional duplicate dose.
Metoclopramide	10 mg PO up to three times daily as required	Rescue only as prescribed Review persistent nausea, hydration and individual contraindications.

Additional phase-specific support

- FOLFOX4 Day 2 includes folinic acid and fluorouracil bolus followed by a second 22-hour infusion.
- No repeat oxaliplatin is scheduled on Day 2.
- NCIS multi-day guidance: cover the risk on each administered treatment day and delayed risk after treatment, using a reconciled prescription.
- Take the prescribed prevention medicines at the planned times and keep rescue treatment available. Tell the team if nausea or constipation is not controlled; do not duplicate steroid or anti-sickness medicines.
- Report diarrhoea promptly and follow the written rescue plan. Severe symptoms, fever, dehydration or inability to drink need urgent advice.
- White-cell growth-factor injections are prescribed according to individual risk and previous complications. They are not automatically required for every patient or every cycle.
- Avoid cold exposure as advised after oxaliplatin. Report persistent numbness or difficulty with buttons, walking or everyday tasks before the next dose.

Before signing: verify allergies, current medicines, interactions, renal / hepatic function, QT risk, sedation, prior response, total steroid exposure and the rescue-medicine duration. Do not duplicate medicines from another phase.
