PRACTICAL TREATMENT GUIDE

Practical treatment planning

Agree the arrangements with your oncology team.

STEP 1

Before the first treatment

Confirm the aim, likely course length, blood-test arrangements and a working urgent contact number. dihydropyrimidine dehydrogenase (a medicine-processing enzyme) (DPD) testing is required before starting the fluoropyrimidine unless already completed.

STEP 2

Line and pump arrangements

Confirm venous access, the 46-hour fluorouracil pump and disconnection arrangements before leaving. Know whom to contact for leakage, an alarm, line pain or a pump that finishes unexpectedly.

STEP 3

If treatment is delayed

Ask the unit to confirm the new treatment and blood-test dates. Re-anchor supportive medicines to the treatment actually given; do not take an extra or catch-up anticancer dose yourself.

STEP 4

Getting help between visits

Follow your oncology unit's urgent advice for fever, infection, severe diarrhoea, chest pain or difficulty breathing. Bring your treatment card and current medicines list.
