SACTCHECK · TREATMENT PASSPORT

Cisplatin + etoposide + chest radiotherapy

A record of what you experience

One cycle per page. Each medicine has its own symptom table. Mark the worst symptoms since your last review, when they occurred and what they stopped you doing. Overlapping symptoms can be recorded under more than one medicine; you do not have to identify the cause.

These are patient-language severity prompts, not a validated questionnaire or a formal Common Terminology Criteria for Adverse Events (CTCAE) grading tool. Your team assigns the clinical grade. Serious symptoms override the columns: call without waiting to decide a severity level.

Cisplatin on Days 1 and 8; etoposide on Days 1–5. Each cycle lasts 28 days. Two cycles first; two more may be offered after review. Radiotherapy usually starts within 24 hours of the first chemotherapy dose; follow your separate radiation appointment plan.

These pages are reusable recording sheets; the prescribed course length is stated above. Ask for additional sheets as needed.

Emergency: 112 / 999. Severe breathing difficulty, collapse, seizure or severe chest pain needs emergency help.

Contact oncology immediately for temperature ≥37.5°C or ≤36°C, shivering or suddenly feeling unwell, even with a normal temperature. Follow your own hospital's instructions. If you cannot reach the team, seek urgent medical assessment.
