Everolimus + exemestane

Usual starting doses are everolimus 10 mg once daily and exemestane 25 mg once daily; use the doses on your prescription. Both tablets are taken every day continuously. There is no planned rest week. Review benefit and tolerability over time; there is no fixed adjuvant completion date.

Your treatment and review passport

Bring this to reviews. Record symptoms, treatment changes and questions when helpful. You do not need to complete a daily diary or calculate a toxicity grade.

The four sheets are reusable review periods, not a prescribed number of cycles. Follow the treatment and rest days agreed with your team; do not calculate a restart from this sheet.

These patient-language prompts are not a validated questionnaire or a formal Common Terminology Criteria for Adverse Events (CTCAE) assessment. Urgent symptoms override the form.

Emergency: 112 / 999. Severe chest pain, major breathing difficulty, collapse or stroke symptoms need emergency help.

Contact your treating team promptly: Contact the oncology team promptly for new or worsening cough or breathlessness, fever or infection symptoms, mouth sores that prevent drinking/eating, severe diarrhoea or dehydration, or marked thirst and frequent urination. Severe breathing difficulty, collapse or swelling of the tongue/throat needs emergency help.
