BASELINE → TREATMENT → FOLLOW-UP

Tests and milestones through treatment

Columns show sequence, not equal durations or appointments. A test is only complete when performed and reviewed. Echo timing and cancer-imaging timing are different. Symptoms can bring any check forward.

Check	Select indication / chemotherapy	Anthracycline first, if used	Antibodies with taxane	Surgery / adjuvant continuation	Completion / follow-up
Blood tests	Baseline antibody and companion-regimen checks	Follow the chosen anthracycline source	Before each cycle plus companion-regimen checks	Follow the current medicines	Follow abnormal results / next plan
Echo / cardiac assessment	Cardiac risk and baseline review	Reassess after anthracycline, before first HER2 dose	First echo 12 weeks after HER2 begins	Every 12 weeks during HER2; at completion	Follow-up for risk / chosen medicine
Cancer imaging / markers	Baseline disease assessment	Clinical response; imaging if concern	Response review as planned; not tied to echo	Reassess disease and treatment plan	Breast surveillance after early treatment
Surgery / radiotherapy	Agree indication and sequence	No automatic concurrent radiation	Coordinate with both teams	Local treatment as indicated	Review recovery and late effects
Endocrine / bone health	Check hormone receptors / fracture risk	Plan endocrine therapy if indicated	dual-energy X-ray absorptiometry (bone density) (DEXA) when relevant to bone-risk plan	Endocrine timing by the treating team	Individual DEXA / bone follow-up

The team arranges and reviews tests. This guide shows expected timing; it does not record completed appointments. National Cancer Control Programme (NCCP) 00350 v3 · official regimen · ESMO 2024 early breast cancer guideline · treatment and follow-up · ESC 2022 cardio-oncology guideline · cardiac surveillance and risk · NICE NG101 · bone health and follow-up · ESMO metastatic breast cancer guideline · 2026

THE WHOLE TREATMENT JOURNEY

Pertuzumab + trastuzumab · with selected chemotherapy: the whole pathway

HER2-positive early breast cancer · neoadjuvant or adjuvant framework

intravenous (IV) pertuzumab and IV trastuzumab every 21 days. Before surgery: 3–6 cycles alongside the selected chemotherapy. After surgery: up to 18 cycles overall under the agreed adjuvant plan. If an anthracycline is used first, finish it before starting these antibodies with the taxane phase. Confirm the exact companion regimen and local access.

Read from left to right. Columns show stages, not equal lengths of time. This is a general plan: no dates or personal information are needed. Your team confirms which steps apply and arranges appointments.

Treatment, tests and reviews across the course

Care / check	Select indication / chemotherapy	Anthracycline first, if used	Antibodies with taxane	Surgery / adjuvant continuation	Completion / follow-up
Cancer medicines NCCP	Confirm diagnosis and exact regimen	See the dose-day map: antibodies with selected chemotherapy	Start antibodies with the taxane	Confirm indication, companion and continuation	Review benefit / tolerance and next plan
Surgery / radiotherapy EARLY	Agree indication and sequence	No automatic concurrent radiation	Coordinate with both teams	Local treatment as indicated	Review recovery and late effects
Blood tests NCCP	Baseline antibody and companion-regimen checks	Follow the chosen anthracycline source	Before each cycle plus companion-regimen checks	Follow the current medicines	Follow abnormal results / next plan
Echo / cardiac checks NCCP · ESC	Cardiac risk and baseline review	Reassess after anthracycline, before first HER2 dose	First echo 12 weeks after HER2 begins	Every 12 weeks during HER2; at completion	Follow-up for risk / chosen medicine
Scans / tumour markers EARLY	Baseline disease assessment	Clinical response; imaging if concern	Response review as planned; not tied to echo	Reassess disease and treatment plan	Breast surveillance after early treatment
Endocrine / DEXA BONE	Check hormone receptors / fracture risk	Plan endocrine therapy if indicated	DEXA when relevant to bone-risk plan	Endocrine timing by the treating team	Individual DEXA / bone follow-up

What each check is for

1

Blood tests

full blood count (FBC), kidney and liver profile at baseline and before every 21-day cycle. The team reviews the necessary results before a planned dose. The selected chemotherapy can require extra or more frequent checks.

Check safety before the next dose.

Ask / **act:** Agree the booking owner, result reviewer and action if overdue.

Sources: NCCP

2

Heart tests

Check heart pumping function before starting HER2 treatment. Repeat echo or multigated acquisition (heart pumping) scan (MUGA) every 12 weeks: around cycle 5, then cycle 9 if 21-day cycles stay on time. Earlier checks are needed for symptoms or abnormal findings. Count elapsed time from the first HER2 dose; changing phase or route does not restart the clock.

Monitor pumping function and relevant rhythm risk.

Ask / **act:** Agree the booking owner, result reviewer and action if overdue.

Sources: NCCP · HERCEPTIN · ESC

3

Cancer imaging

Baseline breast and nodal imaging, with staging tests appropriate to the diagnosis. Review response during preoperative treatment and before surgery. After local treatment, arrange breast surveillance; routine computed tomography (CT), positron emission tomography (PET) or tumour-marker testing is not the usual screening plan for someone without symptoms.

Assess response or follow-up needs.

Ask / **act:** Agree the booking owner, result reviewer and action if overdue.

Sources: EARLY

4

Bone health

If the cancer is also hormone-receptor positive, endocrine treatment may form part of the wider plan. Bone-density testing is linked to aromatase inhibitors, ovarian suppression and fracture risk; it is not automatically required because a HER2 medicine is prescribed. Agree baseline DEXA where indicated and individual follow-up.

Assess fracture risk where relevant.

Ask / **act:** Agree the booking owner, result reviewer and action if overdue.

At the next review, ask

- Which treatment phase am I in, and what happens next?
- Which test is expected next, who arranges it, and who explains the result?
- Who should I contact if an expected appointment has not arrived?

This map does not show whether a test has been ordered, booked or completed. Do not wait for a scheduled test if you develop new symptoms.
