QUASAR modified weekly fluorouracil + folinic acid

National Cancer Control Programme (NCCP) 00428 · Source reconciled; independent clinical, pharmacy and patient/PPI review pending

PRACTICAL TREATMENT GUIDE

Practical treatment planning

Agree the arrangements with your oncology team.

STEP 1

Before treatment

Confirm the treatment aim, duration, dihydropyrimidine dehydrogenase (a medicine-processing enzyme) (DPD) result, blood tests, prescription and contact numbers.

STEP 2

Visits and access

Folinic acid and fluorouracil injections are given once each week. The adjuvant course is 30 weeks; metastatic treatment continues only while appropriate. This weekly schedule has no planned two-week rest block.This regimen does not require a home infusion pump.

STEP 3

If treatment is delayed

Ask for revised written treatment and support-medicine instructions. Do not make up missed doses or carry an old plan into a new phase.

STEP 4

Getting help

Keep the wallet card and medicine list available. Contact the team promptly for infection, dehydration, chest symptoms or significant toxicity.
