Zoledronic acid · adjuvant breast treatment

> **Supportive prescription draft for review.** This is a regimen template. It is not an issued patient prescription; individual review and completion are required.

Before each six-monthly infusion

Active medicines: Zoledronic acid

Emetogenic risk: Minimal

Medicine	Dose / route	When
Calcium	At least 500 mg orally daily	Daily supplementation unless hypercalcaemia is present Review diet, calcium results and the prescribed preparation.
Vitamin D	At least 400 IU orally daily	Daily supplementation unless hypercalcaemia is present Review deficiency, calcium results and individual supplementation needs.

Additional phase-specific support

- No routine antiemetic premedication is required.
- Ensure adequate hydration; avoid overhydration in people at risk of heart failure.
- Review dental health and symptoms, calcium status, renal results and any nephrotoxic medicines.
- Hold/restart and renal dose decisions need the current National Cancer Control Programme (NCCP) assessment and prescriber review.

Before signing: verify allergies, current medicines, interactions, renal / hepatic function, QT risk, sedation, prior response, total steroid exposure and the rescue-medicine duration. Do not duplicate medicines from another phase.

Individual changes / rescue duration: _____
Prescriber / date: _____ Pharmacy review: _____
