NATIONAL CANCER CONTROL PROGRAMME (NCCP) 00605 · VERSION 2

Talazoparib · breast monotherapy

Talazoparib is taken once daily continuously until disease progression or unacceptable toxicity. The usual starting dose is 1 mg; kidney function, interactions and side effects can require a different prescription.

Your treatment and review passport

Bring this to reviews. Record symptoms, treatment changes and questions when helpful. You do not need to complete a daily diary or calculate a toxicity grade.

The four sheets are reusable review periods, not a prescribed number of cycles. Follow the treatment and rest days agreed with your team; do not calculate a restart from this sheet.

These patient-language prompts are not a validated questionnaire or a formal Common Terminology Criteria for Adverse Events (CTCAE) assessment. Urgent symptoms override the form.

Emergency: 112 / 999. Severe chest pain, major breathing difficulty, collapse or stroke symptoms need emergency help.

Contact your treating team promptly: Contact oncology urgently for fever, shivers, infection, unusual bleeding, marked fatigue or new breathlessness.
