National Cancer Control Programme (NCCP) 00712 · clinician draft

Nivolumab, ipilimumab, paclitaxel and carboplatin

> **Supportive prescription draft for review.** This is a regimen template. It is not an issued patient prescription; individual review and completion are required.

Cycle 2 onwards · Day 22 nivolumab alone

Active medicines: nivolumab

Emetogenic risk: Minimal

No routine prophylactic antiemetic order is populated for this phase. Agree an individual symptom-treatment plan where needed.

Additional phase-specific support

- Both immune medicines can inflame healthy organs during treatment or after it stops. Keep your immune alert card and report new symptoms promptly, including for at least five months after the last dose.

Before signing: verify allergies, current medicines, interactions, renal / hepatic function, QT risk, sedation, prior response, total steroid exposure and the rescue-medicine duration. Do not duplicate medicines from another phase.

Individual changes / rescue duration: _____
