SACTCHECK · TREATMENT PASSPORT

Serplulimab, carboplatin and etoposide

A record of what you experience

One cycle per page. Each medicine has its own symptom table. Mark the worst symptoms since your last review, when they occurred and what they stopped you doing. Overlapping symptoms can be recorded under more than one medicine; you do not have to identify the cause.

These are patient-language severity prompts, not a validated questionnaire or a formal Common Terminology Criteria for Adverse Events (CTCAE) grading tool. Your team assigns the clinical grade. Serious symptoms override the columns: call without waiting to decide a severity level.

Induction lasts four planned 21-day cycles unless treatment needs to stop earlier. On Day 1 you receive serplulimab, carboplatin and etoposide by drip. With the standard intravenous (IV) schedule, etoposide is repeated on Days 2 and 3. After induction, carboplatin and etoposide stop. Serplulimab alone can continue every three weeks while it is helping and its risks remain acceptable. There is no fixed universal number of maintenance cycles in this National Cancer Control Programme (NCCP) regimen. Your team may instead prescribe etoposide by drip on Day 1 and capsules twice daily on Days 2 and 3. This is a separate alternative, not extra treatment. Oral and IV doses are not interchangeable milligram for milligram. Confirm which plan you have; take the capsules on an empty stomach as prescribed.

The four pages are reusable recording sheets, not a prescribed four-cycle course. Ask for additional sheets as needed.

Emergency: 112 / 999. Severe breathing difficulty, collapse, seizure or severe chest pain needs emergency help.

Contact oncology immediately for temperature ≥37.5°C or ≤36°C, shivering or suddenly feeling unwell, even with a normal temperature. Follow your own hospital's instructions. If you cannot reach the team, seek urgent medical assessment.
