NCCP 00734 · clinician draft

weekly carboplatin AUC 2 / paclitaxel → dose-dense AC

> **Supportive prescription draft for review.** This is a regimen template. It is not an issued patient prescription; individual review and completion are required.

Phase 1 · weekly carboplatin / paclitaxel

Active medicines: Carboplatin + Paclitaxel

Emetogenic risk: Moderate · carboplatin AUC <4

Medicine	Dose / route	When
Ondansetron	8 mg orally twice daily	Day 1 NCCP alternative to 16 mg once daily; review QT / hepatic risks
Dexamethasone	8 mg orally	Day 1; reconcile paclitaxel premedication Do not add to the paclitaxel steroid course automatically
Dexamethasone	8 mg orally daily	Days 2–3 reference antiemetic row Reconcile the delayed period with paclitaxel steroids; one final individualised steroid prescription
Metoclopramide	10 mg orally up to three times daily as required	Subsequent days: duration to be confirmed Review contraindications and renal function

Additional phase-specific support

- First paclitaxel dose: dexamethasone 8 mg IV, chlorphenamine 10 mg IV and famotidine 20 mg IV 30 minutes before treatment.
- Day 8 and later: no routine dexamethasone unless the consultant specifies it for reaction/risk; chlorphenamine continues and any famotidine omission requires consultant/local-policy agreement.
- Reconcile antiemetic and taxane dexamethasone into one prescription; never add duplicate steroid courses.
- Four 21-day cycles: paclitaxel on Days 1, 8 and 15; carboplatin AUC 2 on Days 1, 8 and 15.
- This is a weekly combination visit, not paclitaxel alone.

Before signing: verify allergies, current medicines, interactions, renal / hepatic function, QT risk, sedation, prior response, total steroid exposure and the rescue-medicine duration. Do not duplicate medicines from another phase.
