- First paclitaxel dose: dexamethasone 8 mg IV, chlorphenamine 10 mg IV and famotidine 20 mg IV 30 minutes before treatment.
- Day 8 and later: no routine dexamethasone unless the consultant specifies it for reaction/risk; chlorphenamine continues and any famotidine omission requires consultant/local-policy agreement.
- Reconcile antiemetic and taxane dexamethasone into one prescription; never add duplicate steroid courses.
- Four 21-day cycles: paclitaxel on Days 1, 8 and 15; carboplatin AUC 5 on Day 1. Pembrolizumab 200 mg on Day 1 of each cycle (every three weeks).

Before signing: verify allergies, current medicines, interactions, renal / hepatic function, QT risk, sedation, prior response, total steroid exposure and the rescue-medicine duration. Do not duplicate medicines from another phase.
