NCCP 00722 · Set-up and treatment plan

My treatment plan

Treatment purpose / goals:

My oncology SOS number:

My treating team / hospital:

Medicines: Docetaxel · Carboplatin · Trastuzumab · Pertuzumab

Schedule to confirm with my team

Before cycle 1: Baseline blood tests and cardiac assessment are reviewed.

Cycle day 1: Docetaxel + carboplatin + trastuzumab + pertuzumab are given.

Days 2-21: Recovery, supportive medicines and symptom monitoring.

Every 21 days: The cycle repeats if review and blood tests allow.

After chemotherapy: HER2-directed treatment usually continues according to the post-operative/adjuvant treatment plan.

My prescribed supportive medicines / changes to my plan:

Call first; write later. Do not wait for the next appointment or a diary score if a symptom worries you. Follow your oncology team's urgent-call instructions. For a medical emergency in Ireland call 112 or 999.

Scan for your regimen-specific patient portal and visual guide.

SACTCHECK / PATIENT TREATMENT PASSPORT

TCHP

NCCP 00722 · Cycle 1

Cycle number: _____ Start date: _____ Review date: _____

Current medicines / dose changes: _____

Record the worst symptom in each interval: dates, number of episodes/readings and effect on daily activities. A blank cell means not recorded, not “no symptom”.

Symptom / body system	Days 1-7	Days 8-14	Days 15-21
Heart			
Bowel			
Mouth / taste			
Blood / infection			
Nerves			
Skin / nails			
Infusion symptoms			
Swelling			

What happened / what it stopped me doing

Advice received, action taken and follow-up

Call oncology promptly about new or worsening symptoms. Bring this record and your current medicines to review.
