Weekly paclitaxel + trastuzumab → trastuzumab continuation

> **Supportive prescription draft for review.** This is a regimen template. It is not an issued patient prescription; individual review and completion are required.

Adjuvant continuation · trastuzumab alone

Active medicines: Trastuzumab

Emetogenic risk: Minimal

No routine prophylactic antiemetic order is populated for this phase. Agree an individual symptom-treatment plan where needed.

Additional phase-specific support

- Routine prophylactic antiemetics and paclitaxel premedicines are not carried into this phase. Treat prior nausea / infusion reactions under an individual plan.
- Continue HER2 cardiac monitoring; ending paclitaxel does not end echo surveillance.

Before signing: verify allergies, current medicines, interactions, renal / hepatic function, QT risk, sedation, prior response, total steroid exposure and the rescue-medicine duration. Do not duplicate medicines from another phase.

Individual changes / rescue duration: _____
